Contents Volume 67

Contents

Towards a systematic approach to the capture of patterns within a business domain
I. Seruca and P. Loucopoulos 1

OS Portal: an economic approach for making an embedded kernel extensible
D.-W. Chang and R.-C. Chang 19

A dynamic protocol conformance test method
M. Kim, S. Yoo, J. Park, S. Kang, S.J. Hyun and H. Lee 31

Improving system performance in contiguous processor allocation for mesh-connected parallel systems
K.-H. Seo and S.-C. Kim 45

CASE tool evaluation: experiences from an empirical study
D. Budgen and M. Thomson 55

A morphology-driven string matching approach to Arabic text searching
S.H. Mustafa 77

Threshold signature scheme using self-certified public keys
T.-S. Wu and C.-L. Hsu 89

Controlling access in large partially ordered hierarchies using cryptographic keys
M.-S. Hwang and W.-P. Yang 99

Lightweight agents for intrusion detection
G. Helmer, J.S.K. Wong, V. Honavar, L. Miller and Y. Wang 109

A hybrid authentication protocol for large mobile network
H.-Y. Chien and J.-K. Jan 123

Detecting and restoring the tampered images based on iteration-free fractal compression
C.-T. Wang, T.-S. Chen and S.-H. He 131

ARDIN extension for virtual enterprise integration
R. Chalmeta and R. Grangel 141

An empirical comparison and characterization of high defect and high complexity modules
A. Güneş Koru and J. Tian 153

GM-WTA: An efficient workflow task allocation method in a distributed execution environment
J.H. Son, S.K. Oh, K.H. Choi, Y.J. Lee and M.H. Kim 165

Mining association rules on significant rare data using relative support
H. Yun, D. Ha, B. Hwang and K.H. Ryu 181

Web-application centric object prefetching
A.P. Pons 193

doi:10.1016/S0164-1212(03)00171-7

An inexact model matching approach and its applications
H. Zhuge 201

A method of formal requirement analysis for NPP I&C systems based on UML modeling with software cost reduction
S.R. Koo, H.S. Son and P.H. Seong 213
